Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

WHAT DOES HE THINK AND FEEL? • Wants a secure, responsive application that makes online shopping quick and hassle-free. • Worries about payment gateway vulnerabilities, hidden costs, and receiving counterfeit items. • Values transparent reviews, clean visual interfaces, and precise delivery ETAs. • Feels overwhelmed by cluttered marketplaces with misleading promotional tags.	WHAT DOES HE SEE? • An over-saturated market filled with repetitive, sluggish mobile shopping applications. • Peers constantly comparing platform prices and eagerly unboxing local deliveries. • Inundated with multi-layered discount banners that often hide actual service charges. • Social media product advertisements prompting seamless in-app purchases.
WHAT DOES HE HEAR? • Friends recommending apps with one-click return policies and rapid tracking mechanisms. • Colleagues warning against unverified vendors and poor customer care services. • Tech reviewers praising applications that feature native, highly optimized checkout pipelines.	WHAT DOES HE SAY AND DO? • Actively looks for filtered search results to minimize navigation timelines. • Advocates for platform transparency, authentic feedback, and reliable inventory indicators. • Maintains an active digital presence, preferring comprehensive smart utilities over standalone tools.
PAIN • Frustrated by long, multi-layered checkout loops and failed online payment processes. • Anxious over unauthentic ratings, fake stock metrics, and absent order cancellation pipelines.	GAIN • Achieves frictionless buying experiences with intuitive, secure checkout flows. • Saves substantial time using context-driven product recommendations and instant package tracking.
